General

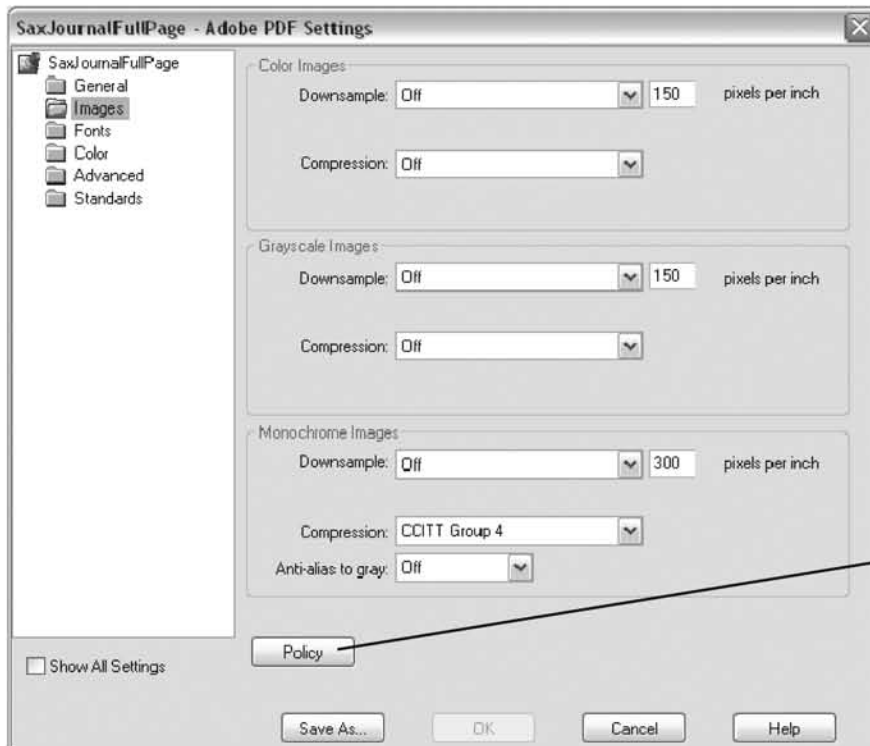

INDESIGN CREATIVE SUITE CS2

We just upgraded our software to InDesign CS2 and Adobe Acrobat 7.0. We (like you) are trying to figure out the idiosyncracies of making PDF files, whether from inside of InDesign, or simply distilling InDesign saved files using Acrobat Distiller 7.0.

For now it seems these "job options" settings work for making full page Saxophone Journal PDF files that bleed properly.

Please keep in mind that Saxophone Journal is trimmed (cut) to 8.375 by 10.875 inches. Full-page bleeds should extend 1/8th to 2/8ths inches beyond our trim size.
